

Become A Sustainable Manufacturing Leader

The Connecticut State Energy Sector Partnership is offering no cost technical services to manufacturing firms that are interested in becoming more sustainable.

You will help **shape the future** of Connecticut's workforce by:

- ➔ Co-creating a vision for sustainability and green manufacturing in Connecticut
- ➔ Shaping the nature and content of education and training programs that will be developed
- ➔ Identifying the best uses for training dollars to meet green skill needs

Free consulting and support to "green" your facility, increase efficiency and reduce waste.

Consulting will include:

- ➔ Analysis of your current and potential green practices
- ➔ An outline of skills and competencies that your employees need to implement these practices
- ➔ Links to education and training providers who are positioned to provide exactly the right training to address those needs
- ➔ Connections to funding programs which may offset some of the costs associated with going green

The State Energy Sector Partnership has engaged the Council for Adult and Experiential Learning (CAEL) to provide consulting and research to assist education and training institutions to more effectively meet industry skills needs.

To see if your firm is eligible to participate, contact Joel Simon:
